

Analysis Chocolate Sales

Analysis report (2022-2024)

Prepared by Aseel

Executive Summary:

This report analyzes chocolate sales data from 2022 to 2024. The company operates across 6 countries, sells 22 products, and employs 25 salespeople, closing 1,094 deals per year.

The purpose of this analysis is to identify sales patterns, top performers, and hidden trends that support better business decisions. Over the three-year period, the company achieved a total growth of 12.27%.

Scope:

This analysis is exploratory in nature and aims to gather the following information:

- Product - The best-performing products in terms of sales amount and number of boxes shipped, with the ability to filter by product. For example, the growth rate and total sales amount between 2022 and 2024 can be determined by filtering for a specific product, and so on.
- Country - The percentage of sales amount and total boxes shipped for each country.
- Salesperson - The best-performing salesperson in terms of total sales amount over three years, with the ability to filter for the growth rate between 2022 and 2024, and so on.
- Date (Year) - The total sales amount between 2022 and 2024.

Questions:

- Which salesperson and product performed best in terms of sales amount?
- Which country performed best in terms of sales amount between 2022 and 2024?
- Which year performed best in terms of sales amount?
- What was the growth rate between 2022 and 2024?
- How many deals were made per year?
- What was the total sales amount and number of boxes shipped over three years?
- Is there a relationship between the amount and the number of boxes shipped?
- Why are there deals for less than \$100? Are there errors? Or not?
- What are the forecasted sales and boxes shipped for 2025?
- Is the number of deals expected to change in 2025?

Data Source:

The file from www.kaggle.com contains 3282 rows and 6 columns (Salesperson, Country, Product, Date, Amount, and Boxes Shipped). I corrected the Date column using Power Query by splitting it into three parts, removing errors, merging the parts, and formatting the date. I added a column for deals under \$100 USD, using the COUNTIFS function to compare a single row of Salesperson, Country, Product, and Amount (under \$100 USD) with all rows in the table. I then analyzed the data using a pivot table.

Analysis:

- What was the total sales amount and number of boxes shipped over three years?

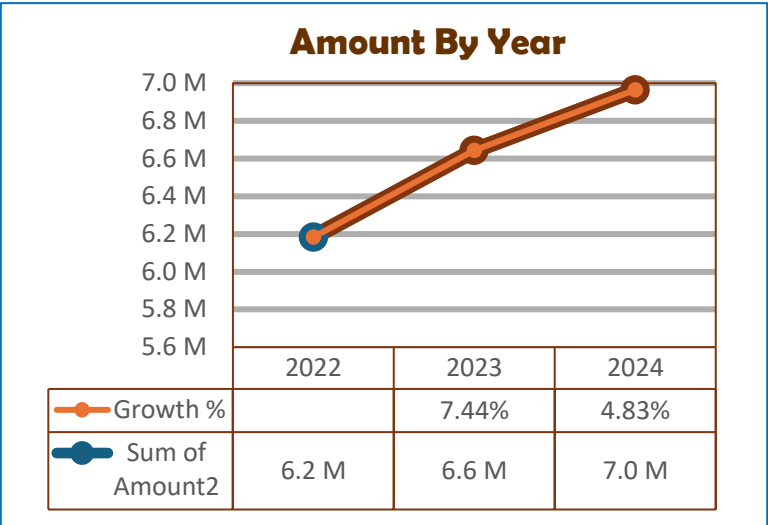

- How many deals were made per year?

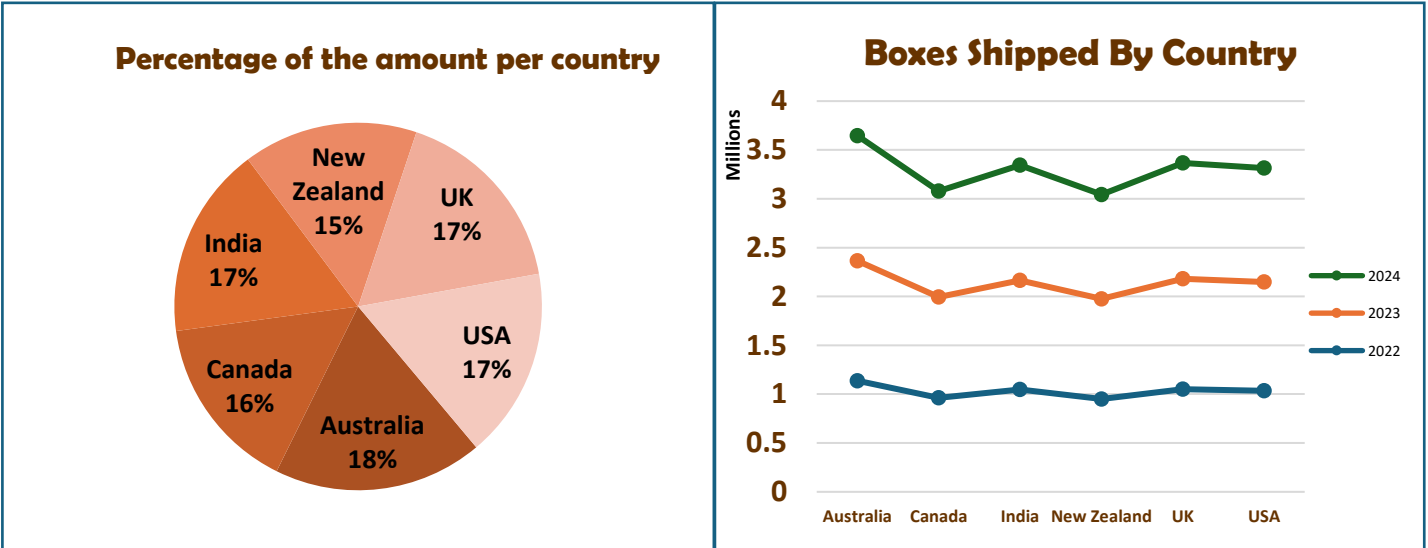

- What was the growth rate between 2022 and 2024?
Over the three-year period, the company achieved overall growth of 12.27%, its best growth rate during 2024.

	2022	2023	2024	
Growth %		7.44%	4.83%	Growth Rate By 3 year 12.27%
Sum of Amount2	6183625	6643377.96	6964568.9	

- Which year performed best in terms of sales amount?
During 2024, this was the best year in terms of sales, achieving nearly \$7 million with a growth rate of 7.44%.

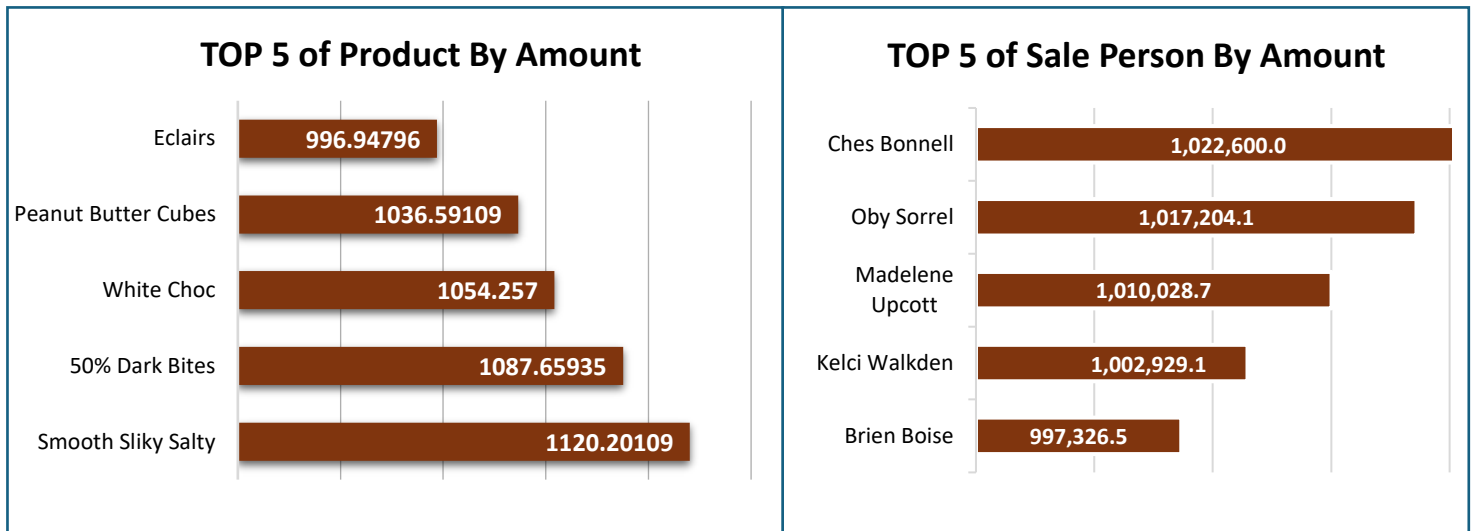

- Which country performed best in terms of sales amount between 2022 and 2024?
The charts show that **Australia** has the best sales performance, achieving the highest percentage among the countries of "18% " in terms of amount and number of boxes shipped over 3 years, but on the other hand, **New Zealand** has the worst performance in terms of amount and number of boxes shipped.

- Which salesperson and product performed best in terms of sales amount?

- The best of Salesperson is Ches Bonnell
- The best product is Smooth Sliky Salty

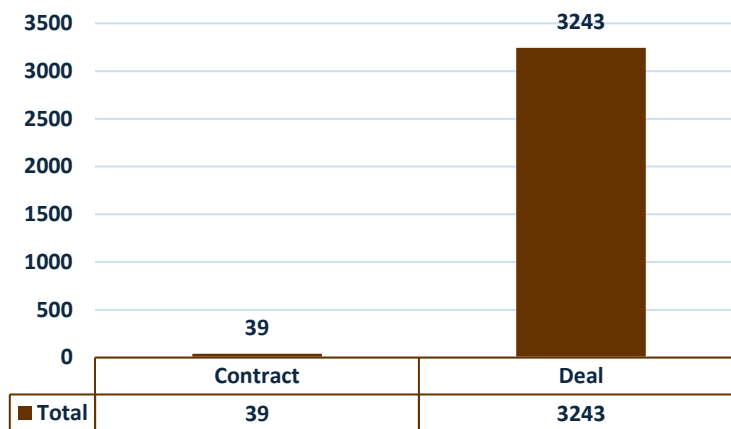

- Is there a relationship between the amount and the number of boxes shipped?

There is no correlation between the amount and the number of boxes shipped at the transaction level — meaning that the price per box varies significantly between transactions and countries.

	<i>Amount</i>	<i>Boxes Shipped</i>
Amount	1	
Boxes Shipped	-0.012951551	1

- Why are there deals for less than \$100? Are there errors? Or not?

The contracts represent 1.19% of deals with values under \$100. Their financial impact is small, but their recurrence over three years reflects stable relationships that deserve the salespeople's focus.

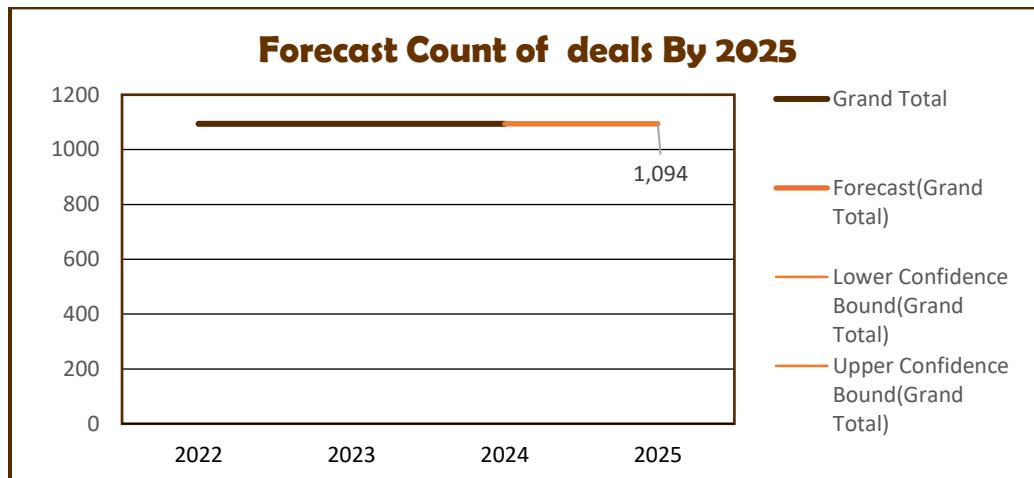

- What are the forecasted sales and boxes shipped for 2025?
Based on the linear trend, sales are expected to reach approximately \$7.37M in 2025, with boxes shipped forecasted at ~185,000.

- Is the number of deals expected to change in 2025?

The deal count is forecasted to remain stable at 1,094, confirming that growth comes from larger orders, not more deals.

Recommendations:

- Review contracts under \$100 with your sales team to focus on increasing their value.
- Australia is the best country in terms of value, so we should close more deals there and concentrate our marketing efforts.
- In New Zealand, there's a problem with the total amount and number of boxes shipped annually, so salespeople should be urged to increase that.
- While growth has come from larger shipments, the deal count has remained flat. It is recommended to focus on increasing the number of deals in each country every year to unlock a new source of growth.
